

### Exhibit 53: AOL International Timeline

March 1, 1995:	Joint venture with Bertelsmann announced to create European online ventures
November 28, 1995:	AOL Germany launched
January 31, 1996:	AOL UK and AOL Canada launched
March 18, 1996:	AOL France launched
May 8, 1996:	Formation of AOL Japan in a joint venture with Mitsui and Nikkei
April 15, 1997:	AOL Japan launched
October 7, 1997:	AOL and Bertelsmann announced plans to launch online service in Australia
February 10, 1998:	AOL and CIC announced plans to launch online service in Hong Kong
October 7, 1998:	AOL Australia launched
December 15, 1998:	AOL and Cisneros Group announced Latin America joint venture
January 26, 1999:	AOL surpassed 3 million international AOL and CompuServe members
September 28, 1999:	AOL Hong Kong launched
October 14, 1999:	AOL Germany became the first international AOL service to surpass one million subscribers
November 16, 1999:	AOL Brasil launched
January 20, 2000:	AOL Latin America filed a registration statement with the SEC for an IPO

Source: Company reports

In the sections that follow we provide brief descriptions of the various international Internet markets followed by projections for the AOL service in each market. There are several points worth making about the assumptions behind our projections:

1. We believe there will be greater competition among ISPs internationally due largely to: (1) the lack of a true market leader, as is the case in the U.S. (AOL); (2) a telephone fee structure in some markets allowing carriers to subsidize low-cost (and free) ISP services; and (3) earlier stage in development of the general online market, where brand loyalty and differentiated content have yet to form. Therefore, we are projecting a lower subscriber share for each of the international AOL joint ventures than the 40%–50% shares we project for AOL domestically.
2. We believe subscription services will continue to drive international revenues, at least in the near term. While we project the domestic AOL service will derive nearly 70% of its total revenues from advertising and e-commerce by 2008 (up from an estimated 25% this year), our 2008 revenue projections for most international territories call for a 40%–50% revenue contribution from advertising/e-commerce.
3. We are modeling EBITDA margin expansion to the 7%–15% range by 2003, reaching 20%–25% by 2005. Profitability gains should be driven by the company's ability to (1) leverage marketing and product development costs of its domestic service, and (2) benefit from declining carrier costs in several markets as these markets deregulate and become more open to competition.
4. We value the AOL international joint ventures on the same basis as we do the domestic service (eight-year DCF analysis). We adjust our valuations by (1) assuming a terminal growth rate 100–200 bps faster internationally (due to the relative immaturity of the markets) and adding a 50–100 bps risk premium to the assumed weighted average cost of capital.

## Canada

## Europe

Growth of the Internet in Europe has been relatively uneven thus far due to cultural, regulatory, and economic differences among its countries. The most highly penetrated European markets thus far are located in the western and northern areas of the continent. We attribute this to: (1) a more competitive telecommunications environment, allowing for lower access; (2) wealth distribution skewed to the north and west; and (3) generally earlier acceptance of technology in the north. For example, according to the Computer Industry Almanac, Sweden is the most highly penetrated country in the world, with an estimated 43.3% of the country's population online in 1999.

Most of the available literature puts the stage of development of the Internet in Europe 2-3 years behind that in the U.S. Most projections call for growth in European Internet usage, advertising and e-commerce to outpace that in the U.S. over the next five years, due primarily to continued communications cost decreases, greater access to capital (both venture capital and public equity activity has picked up dramatically over the past year) and the proliferation of access devices. PC prices in several European markets are below those in the U.S., and wireless access and interactive TV-based Internet access have already gained momentum in Europe.

We present our AOL Europe projections below. Due mostly to domestic competitors which are aligned with telephony carriers, AOL has not yet been able to attain a dominant position in Europe. For example, AOL UK was overtaken as the leading British ISP by FreeServe only four months after launch of its free service. While AOL has countered with a value brand in Netscape, the FreeServe example shows how tenuous the competitive

landscape is in Europe. In its largest European market, AOL is currently significantly behind the T-Online service of Deutsche Telekom (over 3 million subscribers for T-Online versus just over 1 million for AOL Germany).
